2036912-4: 30/04/2023 [10/10/1444] 10:20 [01/05/2023 [11/10/1444] 13:49] Serums - Red-Top (S) Test

	Result	Flag	Units	Ref. Range
Rubella - IgG	12.4		IU/mL	

Interpretation

Negative	0.00 - 4.9	IU/mL
Grayzone (Equivocal)	5.0 - 9.9	IU/mL
Positive	≥ 10.0	IU/mL

Interpretation

**Negative: The absence of detectable IgG-class antibodies suggests the lack of a specific immune response to immunization or no prior exposure to the rubella virus.

**Grayzone : Submit an additional sample for testing in 10 to 14 days to demonstrate IgG seroconversion if recently vaccinated or if otherwise clinically indicated.

**Positive: The reported AI value is for reference only. This is a qualitative test and the numeric value is not indicative of the amount of antibody present. The presence of detectable IgG-class antibodies indicates immunity to the rubella virus through prior immunization or exposure. Individuals testing positive are considered immune to rubella infection.
